# Observing the school garden

Five structured layouts; fictional, unevaluated example

**DEMONSTRATION — NOT SCIENTIFICALLY VALIDATED**

### Abstract

This fictional scenario separates definitions, observations, interpretations, sources and learning paths without evaluating any student.

### Traceability

Status: Canonical state identity not verified
Origin: sha256:8cd72bce589ac690fb6ccfd25f82258a8f29a51e53194c92f35cc6e6fffbcbbb
Realizations: sha256:66d51bb1481cd296e2e8ada225ebfc6602b654a935a4b4c3ce8b3129fd776188
Layouts: sha256:77c5d1a2639afe1a346253f5ddc5f5723f6e2a25931f714bb7cdcd647b9319eb

## A concept: evaporation

### Definition

Evaporation is the change from liquid water to water vapor.

u.def · definition · method · source-ref: ekole:fictional-garden:u.def

### Examples

Water in a shallow dish may decrease over time.

u.ex1 · example · hypothesis · source-ref: ekole:fictional-garden:u.ex1

A wet surface can dry without boiling.

u.ex2 · example · hypothesis · source-ref: ekole:fictional-garden:u.ex2

### Counterexamples

Melting ice is not evaporation.

u.counter · counterexample · method · source-ref: ekole:fictional-garden:u.counter

### Context

Observations depend on temperature, wind and measurement conditions.

u.context · context · method · source-ref: ekole:fictional-garden:u.context

### Limits

A lower water level alone does not establish the mechanism.

u.limit1 · qualification · limitation · source-ref: ekole:fictional-garden:u.limit1

## Understanding an observation

### Learning objective

Distinguish an observation from an interpretation supported by sources.

u.objective · objective · method · source-ref: ekole:fictional-garden:u.objective

### Prerequisites

Recognize a liquid and read a measurement in a table.

u.pre1 · prerequisite · method · source-ref: ekole:fictional-garden:u.pre1

### Reflection question

What alternative explanation should be checked before drawing a conclusion?

u.reflect · reflection · method · source-ref: ekole:fictional-garden:u.reflect

### Steps

Observe and record the dish's initial water level.

u.step1 · step · method · source-ref: ekole:fictional-garden:u.step1

Record another measurement in the same location.

u.step2 · step · method · source-ref: ekole:fictional-garden:u.step2

Compare the readings and identify unknown conditions.

u.step3 · step · method · source-ref: ekole:fictional-garden:u.step3

### Limits

This card proposes a study path; it does not certify competency.

u.limit2 · qualification · limitation · source-ref: ekole:fictional-garden:u.limit2

## Comparing two records

### Question

What can the two records actually establish?

u.question · question · method · source-ref: ekole:fictional-garden:u.question

### Source A

Record A: fictional values entered in a measurement notebook.

e.a · evidence · illustrative_fixture · locator: fixture:education/e.a · source-ref: ekole:fictional-garden:e.a

### Source B

Record B: fictional description of the dish's appearance.

e.b · evidence · illustrative_fixture · locator: fixture:education/e.b · source-ref: ekole:fictional-garden:e.b

**Perspective A**

The notebook gives numbers but no independent calibration.

u.pa · perspective · observation · refs: e.a · source-ref: ekole:fictional-garden:u.pa

**Perspective B**

The description offers visual context but no exact quantity.

u.pb · perspective · observation · refs: e.b · source-ref: ekole:fictional-garden:u.pb

**Synthesis**

The two records complement each other without proving a cause on their own.

u.synth · conclusion · hypothesis · refs: e.a, e.b · source-ref: ekole:fictional-garden:u.synth

**Limits**

No real measurement or photograph is supplied in this demonstration.

u.limit3 · qualification · limitation · source-ref: ekole:fictional-garden:u.limit3

## Separating observation from explanation

**Observations**

The fictional level is lower at the second reading.

u.obs1 · observation · observation · refs: e.a · source-ref: ekole:fictional-garden:u.obs1

The dish is described as uncovered during the interval.

u.obs2 · observation · observation · refs: e.b · source-ref: ekole:fictional-garden:u.obs2

**Interpretation**

Evaporation is one possible explanation, not a proven conclusion.

u.infer · interpretation · hypothesis · refs: e.a, e.b · source-ref: ekole:fictional-garden:u.infer

**How to check**

Repeat the measurement and check for spills.

u.verify · method · method · source-ref: ekole:fictional-garden:u.verify

**Limits**

The fictional setup cannot identify a certain cause.

u.limit4 · qualification · limitation · source-ref: ekole:fictional-garden:u.limit4

## A short documented timeline

**Context**

The events below describe a fictional notebook sequence.

u.chrono.context · context · method · source-ref: ekole:fictional-garden:u.chrono.context

**Events**

Day 1: initial level recorded.

u.event1 · event · observation · refs: e.a · source-ref: ekole:fictional-garden:u.event1

Day 2: second reading recorded.

u.event2 · event · observation · refs: e.a · source-ref: ekole:fictional-garden:u.event2

Day 3: possible explanations discussed.

u.event3 · event · method · source-ref: ekole:fictional-garden:u.event3

**Interpretation**

The order of dates proves no causal relationship.

u.chrono.inference · interpretation · hypothesis · source-ref: ekole:fictional-garden:u.chrono.inference

**Limits**

Dates and records are invented; no field evidence is claimed.

u.limit5 · qualification · limitation · source-ref: ekole:fictional-garden:u.limit5
